

## Role: UI Software Development Engineer

### Job Description

Even the most powerful of platforms will never reach its full potential without a proper interface. We care strongly for the users of our tools and you will be crucial in bringing to life the data and analytics in a powerful and coherent manner. Expect to use lots of ReactJS, map/geo systems and chart tools.

Strong teamwork is important and passion in solving problems as well as willingness to mentor other engineers will greatly help in fitting in. Be expected to self-start and take ownership of your projects.

### Skills & Requirements

**Requirements and Qualification:** BSc. degree or equivalent experience/education.

- Strong experience with ReactJS and Redux/Flux frameworks
- Candidate must possess at least a Bachelor's Degree, Post Graduate Diploma, Professional Degree, Computer Science/Information Technology or equivalent.
- Experience shipping at least one UI platform
- 3-5+ year's UI engineering industry experience.
- Experience and interest in data analytics and complex workflow UI development.
- Experience building and using UI frameworks and UI content workflows
- Able to demonstrate knowledge of solid software engineering practices.

**Good to have:**

- Experience with UI frameworks, HTML5, php, apache, Linux, java, javascript, jQuery, AngularJS, Backbone, XML, JSON, RESTful webservices, AJAX, Node.JS is desired
- Experience with UI development for multi-user collaborative platform is desired
- Experience with building UI's for apps on Android and iOS platforms is good to have
- Google Maps / ESRI maps experience will be a strong plus
- Dygraphs / HighCharts experience will be a strong plus.
